nano... CARING FOR YOUR COFFEE

Atlanta, GA, April 15, 2016

nano purification solutions today unveiled their new range of GEN2 Gas Generators at the Specialty Coffee Association of America Expo.

Used throughout the coffee industry, nitrogen flushing preserves the flavor and freshness of coffee while providing a longer shelf life.

As well as keeping your coffee in perfect condition, the new GEN2 range can provide significant cost savings over nitrogen cylinder or liquid supply and delivers a typical return on investment of less than 24 months.

The new range boasts a wide range of flow rates and purities to suit all applications (Oxygen contents from 5% to less than 10 ppm).

What didn't change is our unique multi-bank design that enables additional generators to be added in the future as demand increases. Your GEN2 nitrogen generator can grow with your company.

The advanced nano GEN2 plus range of Nitrogen Generators use integrated drying cartridges to provide dehydration of the compressed air prior to separation. This innovative feature eliminates the need for a separate desiccant dryer – saving up to 20% purge loss, significantly reducing capital and installation costs and reducing overall pressure drop by 10 psig or more over traditional nitrogen generators.

Nitrogen is a dry, inert gas which is used in a wide range of applications where Oxygen may be harmful to the product or processes. Nitrogen generators use compressed air to deliver a continuous supply of high purity Nitrogen – offering a cost effective and reliable alternative to the use of cylinder or liquid Nitrogen across a wide range of applications.
